📁 PROJECTS

Cyber Risk Insights (CRI)
06/2023 – 09/2023
Area of Responsibility
- Created and maintained dashboards to visualize security insights, employing charts and graphs for easy interpretation.
- Developed the server-side logic to handle user authentication and other backend functionalities.
- Use frontend technologies such as ReactJS, HTML, CSS, and JavaScript to create interactive and responsive dashboards.

Tech Stack
- ReactJS
- NodeJS
- Javascript
- CSS

Features
- Developed and maintained dashboards, translating complex data into visual insights.
- Applied risk-scoring methodologies based on CVE and CVSS scores for efficient threat prioritization.

Chat_App ⊡
Source Code ⊡
This is a personalized Chat App made and developed by me. Users can create groups here with their friends and have fun. Have added some cool features in the app like message loading, notifications, and adding users to the group by one admin. Chats are displayed in real time.

Area of Responsibility
- Responsible for building the whole page.

Tech Stack
- ReactJS
- ChakraUI
- MongoDB
- NodeJS
- ExpressJS

Features
- Provided a message-loading effect in the app.
- Users can make groups with friends in the app.
